

# Computer Technology Recycling

**esi** Electronic Systems

Powerful Technology. Smart Solutions.™

## Secure Data Destructions

Statewide Coverage • 6 Recycling Locations • 1 Proven Process

**ESI Computer Recycling** - manages the retirement and recycling of unwanted computer equipment to ensure that organizations avoid legal risks, environmental concerns, and unnecessary costs associated with e-waste.

### Why should your company be concerned?

**IDENTITY THEFT** is one of the fastest growing crimes in America. The cost to consumers and businesses is in the millions of dollars each year. Companies that don't protect their data on old computers are contributing to identify theft by leaking everything from employee and customer social security numbers to information about credit card accounts, retirement plans, medical data (HIPAA) and more.

- Secure Data Destruction
- No Legal Risks
- No Environmental Concerns
- Zero Land Fill Policy

**Secure Data Destruction** destroys the information from your old equipment and insures that no data will ever be retrieved.

**Equipment That We Shred:** Hard Drives from Computers, Printers, Fax machines, Backup storage tapes, CDs, Floppies, USB thumb drives, Cell Phones and Credit Card Readers.

ESI's process is effective, affordable and easy to implement.
